ABOUT US

EV-Box, leading the electric vehicle sector right from day one

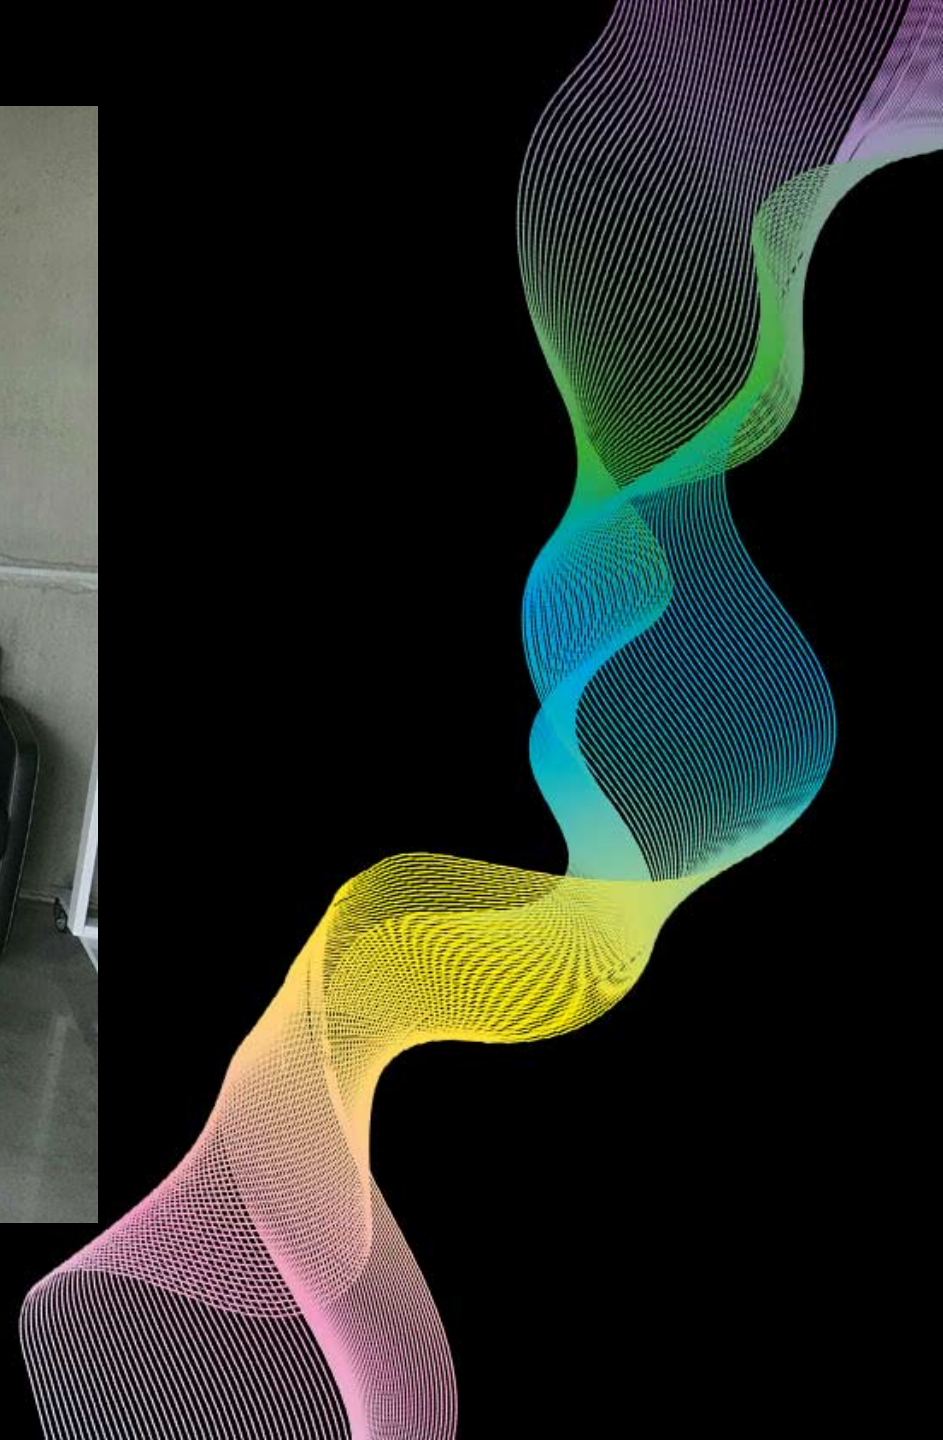

EV-Box is the leading international developer and manufacturer of charging stations for electric and semi-electric vehicles, and the market leader in this sector in the Netherlands. Our company was launched in 2009 and so has been involved in this exciting new sector **since day one**. We take a trailblazing role in the industry, something we have demonstrated time and again with our product innovations and custom solutions. Our products display all the quality and attention to detail you would expect from a Dutch manufacturer, from the design right through to the smart software, production processes, sales support and services. Our chargers are tested and suitable for use with electric cars of all types. The EV-Box system is officially certified by many vehicle manufacturers.

OCPP was initiated by ElaadNL in the Netherlands and has been extended and improved upon over the past eight years by the pioneers in the international EV charging industry. OCPP is currently hosted by the Open Charge Alliance, a Dutch foundation with up to 100 members from 25 countries on 4 continents.

EVBox commits to 1 million electric vehicle charging points by 2025

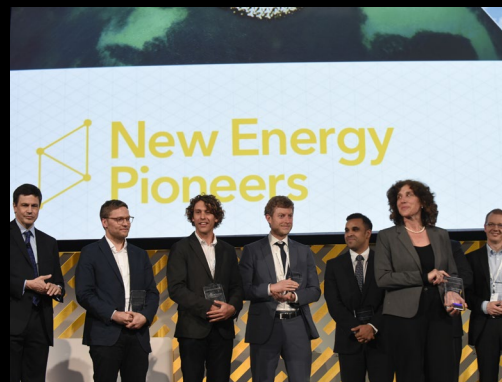

The ambitious commitment was announced today at the Global Climate Action Summit in San Francisco (USA).

Amsterdam, September 14th, 2018. Kristof Vereenooghe (CEO of EVBox) announced today that EVBox, one of the leading global manufacturers of electric vehicle charging stations and related software, is committing itself to having a minimum of 1 million EV charging points placed globally by the year 2025. He announced this on stage at the Global Climate Action Summit, which took place September 12-14 in San Francisco (USA).

Govt to tackle trade deficit by promoting electric vehicles

Times Reporters

The government plans to tackle an adverse trade balance by minimising the consumption of imported fuel through the promotion and development of electric vehicles.

The institute's Acting Director General, Mr Chantho Milattanapheng, who chaired the meeting, pointed out that the strategic plan will be a key guide for the use and management of electric vehicles in Laos. "A pilot project on the

in Laos is increasing at an annual rate of 10 percent and the import of fuel is increasing by eight to 10 percent yearly. "Laos imports a large volume of fuel annually and this has caused a huge trade deficit over the past

Newsletter Nr. 02/20

Second call for proposals: 5 activities selected

Dear newsletter subscribers

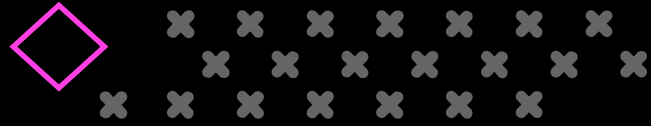

In the context of its second call for proposals, the KliK Foundation has selected five applications for further development, earmarking total funds of one million Swiss francs.

From 28 November 2019 to 26 January 2020, the KliK Foundation carried out a call for project proposals for the procurement of international certificates (ITMOs). Of 90 registered organisations, thirteen submitted applications.

Broad regional and technological distribution

In total, we received 25 applications from the following regions: Africa (11), Asia (6), the Caribbean (2), North America (2) and South America (4). For the first time, applications were submitted by Small Island Developing States (SIDS), countries whose territory and settlement areas are low-lying, making them particularly vulnerable to climate change.

The proposals received can be categorised as follows: improved cookstoves (7), energy efficiency in industry (5), renewable energy production (4), methane avoidance in agriculture (3), e-mobility (3), LFG to energy (1), recycling (1) and methane avoidance in gas extraction (1).

Thank You for your interest 
and look forward to working together
